Applicant 3M INNOVATIVE PROPERTIES COMPANY			

This International Search Report has been prepared by this International Searching Authority and is transmitted to the applicant according to Article 18. A copy is being transmitted to the International Bureau.

This International Search Report consists of a total of 5 sheets.

It is also accompanied by a copy of each prior art document cited in this report.

1. Basis of the report

a. With regard to the language, the international search was carried out on the basis of the international application in the language in which it was filed, unless otherwise indicated under this item.

The international search was carried out on the basis of a translation of the international application furnished to this Authority (Rule 23.1(b)).

b. With regard to any **nucleotide and/or amino acid sequence** disclosed in the international application, see Box No. I.

2. Certain claims were found unsearchable (See Box II).

3. Unity of invention is lacking (see Box III).

4. With regard to the title,

the text is approved as submitted by the applicant.

the text has been established by this Authority to read as follows:

5. With regard to the abstract,

the text is approved as submitted by the applicant.

Box No. IV Text of the abstract (Continuation of item 5 of the first sheet)

A tape and tape roll assembly for adhering thereto debris contained on a surface, such as a non-porous surface. The tape includes a high-adhesion, low-tack adhesive coating. The tape roll comprises a plurality of tape layers, with each tape layer removable from an adjacent underlying layer. The adhesive coating adheres to an outer surface of each layer. The adhesive coating adheres debris contained on the surface to be cleaned to an outermost tape layer of the tape roll without substantially adhering the outermost tape layer to the surface or unwinding the outermost tape layer from the tape roll. The adhesive coating includes at least 56% by weight tackifier.
